visionapp Remote Desktop 2011 speeds up computer system administration

New version offers remote access in real time, continuous work in offline mode and more flexibility

Eschborn, 21 October 2010: visionapp Remote Desktop 2011 (vRD) lets providers of private and public cloud solutions administer computer systems from remote locations in real time. It is now possible to work in offline mode even without a database connection. Furthermore, visionapp Remote Desktop 2011 is now available in a mobile version. The solution speeds up administrative work and increases flexibility.

visionapp Remote Desktop 2011 is ideal for administrators who are responsible for administrating numerous connections to multiple systems simultaneously. Remote desktop connections can be set up and administered in a folder structure. Access is permitted via a central console; IT administrators have direct access to all applications and Websites via the Admin Cockpit. The new mobile application solution does not require any software to be installed: Remote administration can be performed on any computer using a USB stick. With visionapp Remote Desktop 2011, Windows, Citrix and Linux/Unix and Macintosh systems can be administered with ease.

visionapp Remote Desktop is characterised by its ease of use and high level of practicality. "I use visionapp Remote Desktop every day. Automated computer access and unlocking gives me a time savings of 80 per cent. visionapp has developed the ideal combination of simple handling and the best possible functionality", says Tim Mendenhall, Seamon Whiteside + Associates. The daily administrative burden has also been greatly reduced by the new functions, which allow remote access in real time, work in offline mode as well as mobile operation with a USB stick. In addition to the new features, the solution still relies on proven functions: Basic teamwork to allow administrators to work with the same objects concurrently; transparent reporting and a high level of security through Network Level Authentication, Microsoft Terminal Services Gateway and server authentication. The solution is already used by more than 200,000 administrators worldwide.

visionapp Remote Desktop 2011 is available now. The software costs EUR 69 for a single workstation licence and can be purchased at http://www.vRD2011.com directly from visionapp or from its partners.

About visionapp
visionapp is a leading provider of private and public cloud computing solutions, intelligent software as a service platforms and automation software. With these solutions private and public sector enterprises optimize their IT systems, processes and use of mission critical applications while significantly reducing their IT costs.
visionapp started in 2001 as a 100% subsidiary of Dresdner Bank before becoming independent in 2006 via a management buy-out. visionapp provides its platform technology through a network of highly qualified partners and supports the design and implementation of cloud computing architectures with its own services.
Based on a pay per use model visionapp provides customers and partners secure hosting of applications and supporting services in enterprise class data centers. Today more than 10,000 customers utilise the services and products of visionapp AG. The company is headquartered in Eschborn near Frankfurt, Germany, and represented internationally with its own offices and by partners. For more information visit
